PUNTO 1

Dimensiones del conjunto de datos

`dim(ms)`

El conjunto de datos contiene 19,883 observaciones (películas) y 28 variables.

Estructura de los datos

`str(ms)`

El dataset incluye variables cuantitativas y cualitativas, relacionadas con presupuesto, ingresos, duración, popularidad, género, elenco y características de producción.

Resumen estadístico general

`summary(ms)`

El resumen estadístico permite observar medidas descriptivas de las variables cuantitativas, así como la presencia de valores cero en variables financieras y de votación, lo cual indica que no todas las películas cuentan con esta información disponible.

Valores faltantes

`colSums(is.na(ms))`

Se identificó que algunas variables no cuentan con información completa para todas las películas, lo cual es común en conjuntos de datos reales y deberá considerarse en análisis posteriores.

Vista preliminar del conjunto de datos

`head(ms)`

Las primeras filas permiten verificar que los datos fueron cargados correctamente y observar la estructura general de las variables.

Tabla

Table 1: Resumen general del conjunto de datos

Característica	Descripcion
Número de observaciones	19,883 películas
Número de variables	28 variables
Variables cuantitativas	budget, revenue, runtime, popularity, voteAvg, voteCount, genresAmount, productionCoAmount, productionCountriesAmount, actorsAmount, castWomenAmount, castMenAmount, releaseYear
Variables cualitativas	genres, homePage, productionCompany, productionCompanyCountry, productionCountry, director, actors, actorsPopularity, actorsCharacter, originalTitle, title, originalLanguage, releaseDate
Valores faltantes	Algunas películas no cuentan con información completa en todas las variables

El conjunto de datos analizado contiene 19,883 películas y 28 variables. Dentro de las variables cuantitativas se incluye el campo id, el cual se utiliza únicamente como identificador de cada película y no como una variable de análisis. El dataset también contiene variables cuantitativas relacionadas con presupuesto, ingresos, duración y calificaciones, así como variables cualitativas que describen características como género, idioma, país de producción y elenco. Esta exploración permitió obtener una visión general de la estructura del conjunto de datos.

PUNTO 2

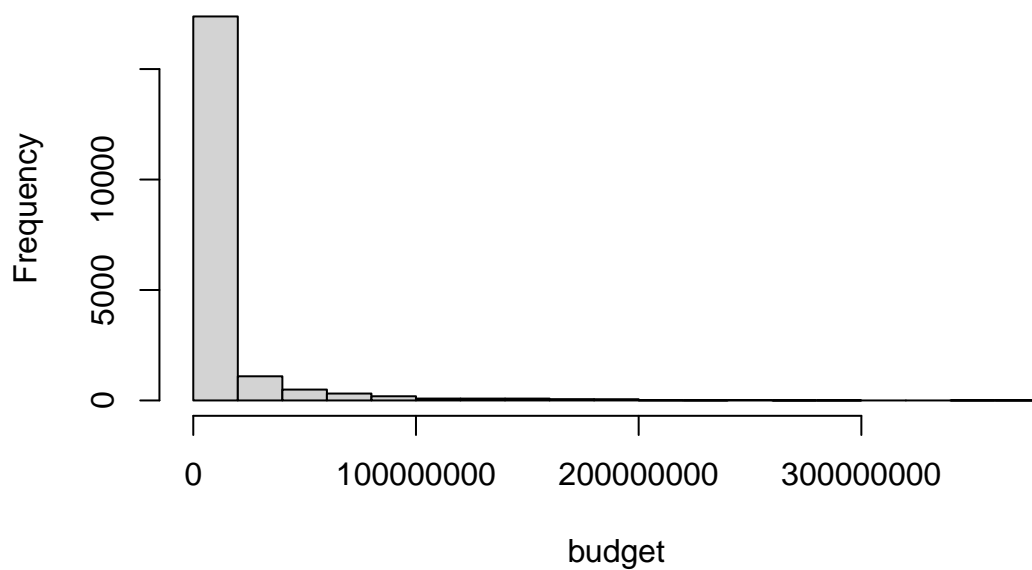

Table 2: Clasificación de las variables del conjunto de datos

	Variable	Tipo_Variable
id	id	Cualitativa nominal
budget	budget	Cuantitativa continua
genres	genres	Cuantitativa continua
homePage	homePage	Cuantitativa continua
productionCompany	productionCompany	Cualitativa nominal
productionCompanyCountry	productionCompanyCountry	Cualitativa nominal
productionCountry	productionCountry	Cualitativa nominal
revenue	revenue	Cualitativa nominal
runtime	runtime	Cualitativa nominal
video	video	Cualitativa nominal
director	director	Cuantitativa continua
actors	actors	Cualitativa nominal
actorsPopularity	actorsPopularity	Cuantitativa discreta
actorsCharacter	actorsCharacter	Cualitativa nominal
originalTitle	originalTitle	Cuantitativa discreta
title	title	Cualitativa nominal
originalLanguage	originalLanguage	Cualitativa nominal
popularity	popularity	Cuantitativa discreta
releaseDate	releaseDate	Cualitativa ordinal

	Variable	Tipo_Variable
voteAvg	voteAvg	Cuantitativa discreta
voteCount	voteCount	Cuantitativa continua
genresAmount	genresAmount	Cualitativa nominal
productionCoAmount	productionCoAmount	Cuantitativa continua
productionCountriesAmount	productionCountriesAmount	Cualitativa nominal
actorsAmount	actorsAmount	Cuantitativa discreta
castWomenAmount	castWomenAmount	Cuantitativa discreta
castMenAmount	castMenAmount	Cuantitativa discreta
releaseYear	releaseYear	Cuantitativa discreta

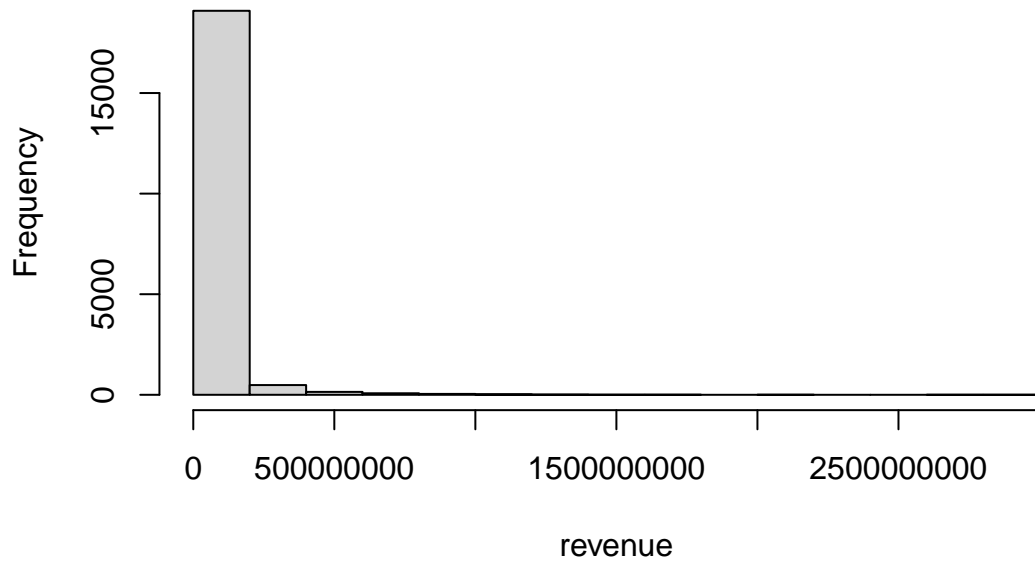

PUNTO 3

Histograma de budget

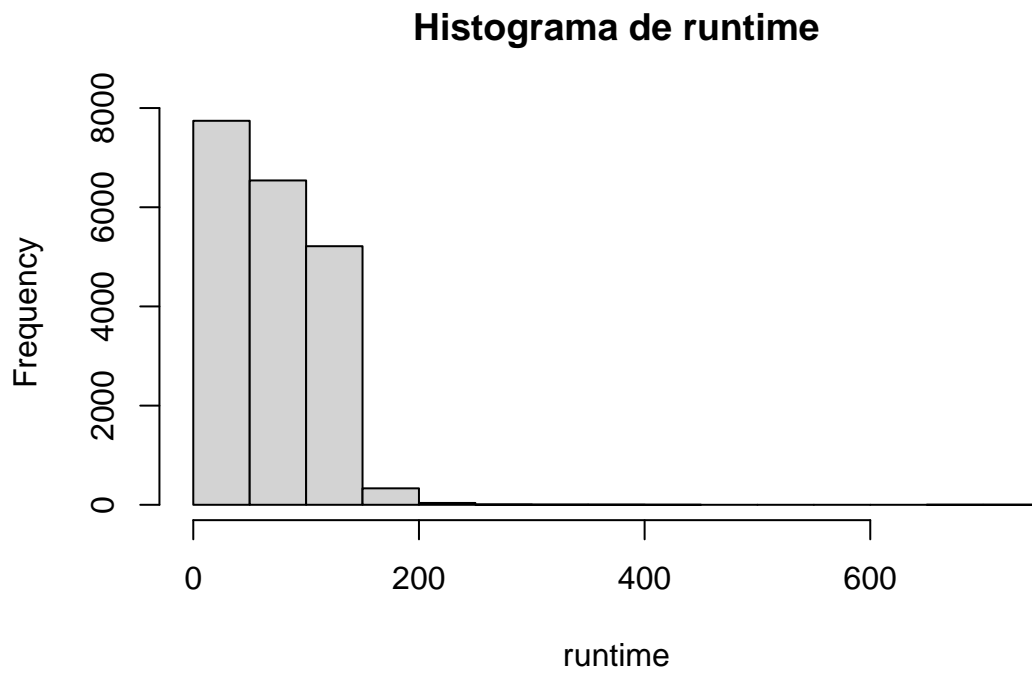

```
##
## Variable: budget
##
## Lilliefors (Kolmogorov-Smirnov) normality test
##
## data: x
## D = 0.37204, p-value < 0.00000000000000022
##
## La variable budget NO sigue una distribución normal.
```

Histograma de revenue

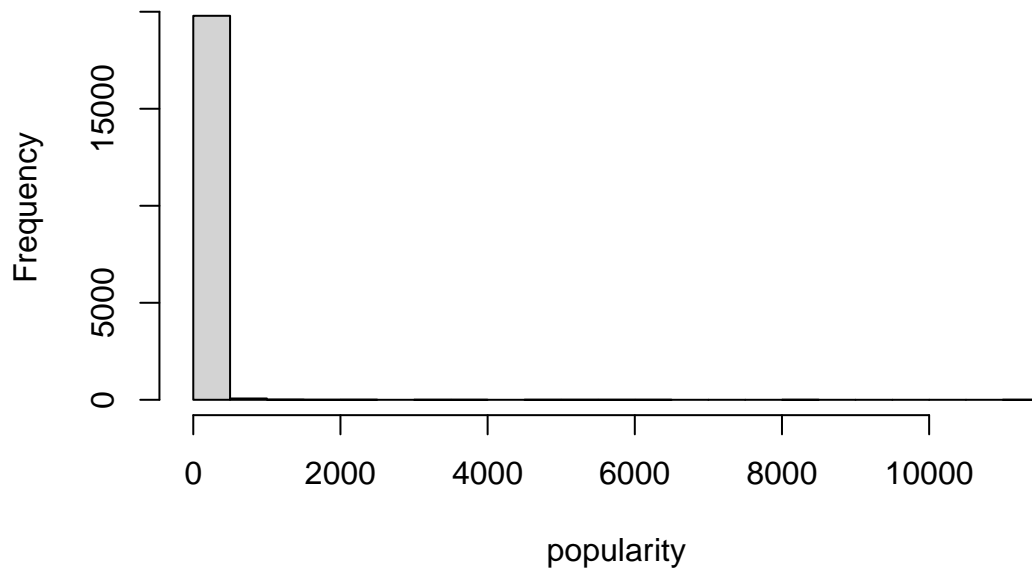

```
##  
## Variable: revenue  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.39765, p-value < 0.00000000000000022  
##  
## La variable revenue NO sigue una distribución normal.
```

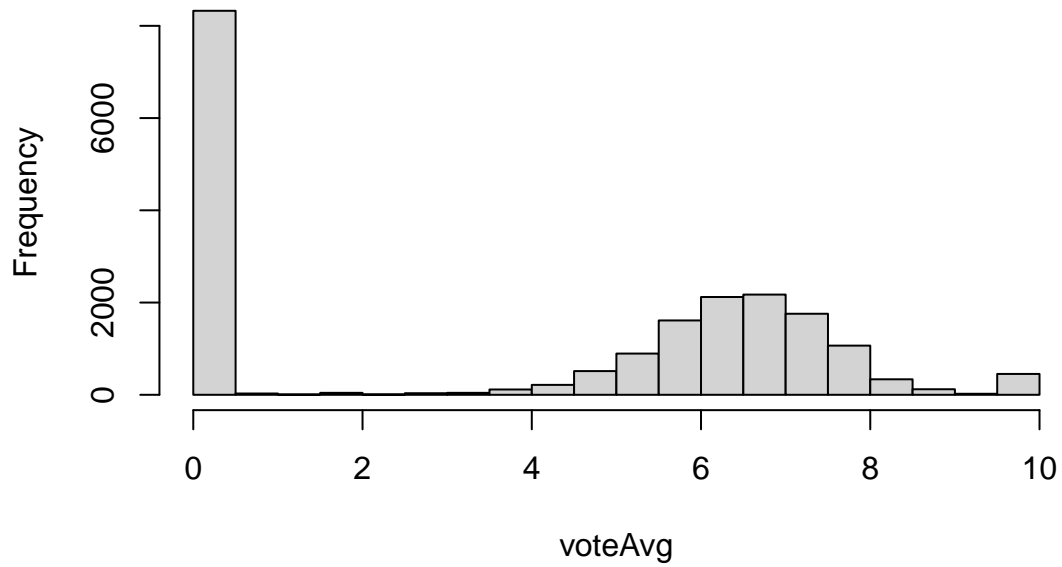

```
##  
## Variable: runtime  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.1629, p-value < 0.00000000000000022  
##  
## La variable runtime NO sigue una distribución normal.
```

Histograma de popularity

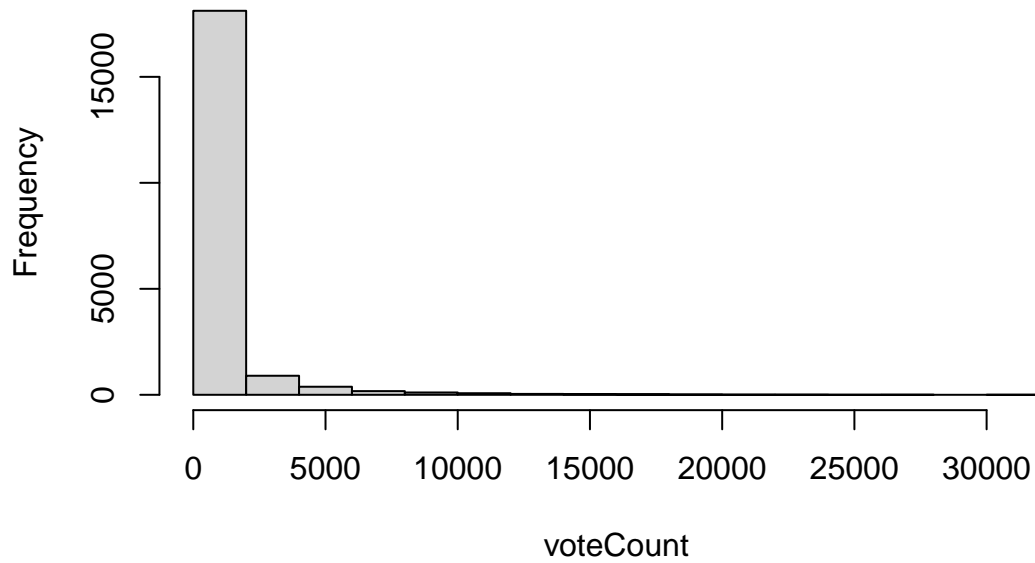

```
##
## Variable: popularity
##
## Lilliefors (Kolmogorov-Smirnov) normality test
##
## data:  x
## D = 0.43322, p-value < 0.00000000000000022
##
## La variable popularity NO sigue una distribución normal.
```

Histograma de voteAvg

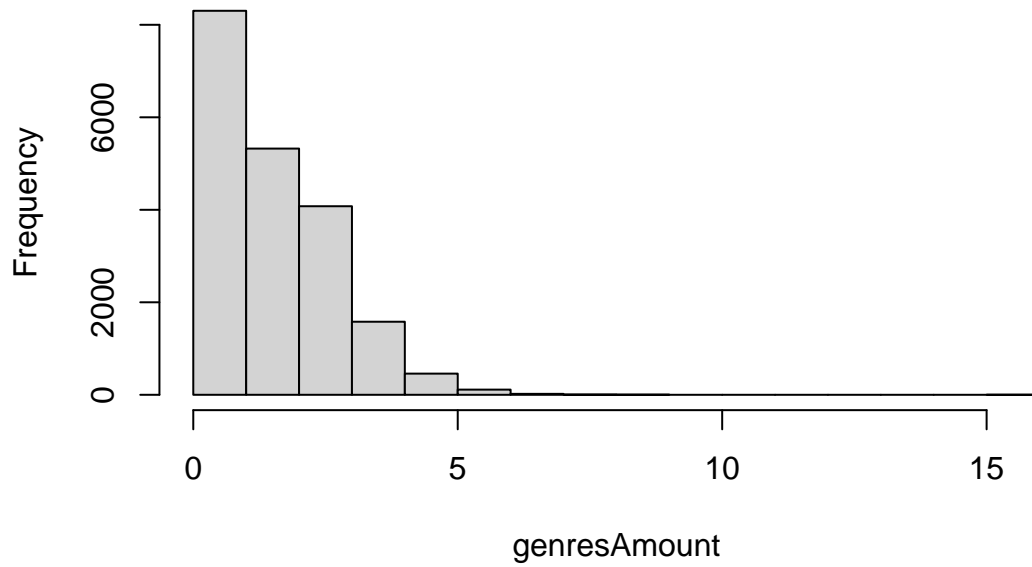

```
##  
## Variable: voteAvg  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.28937, p-value < 0.00000000000000022  
##  
## La variable voteAvg NO sigue una distribución normal.
```

Histograma de voteCount

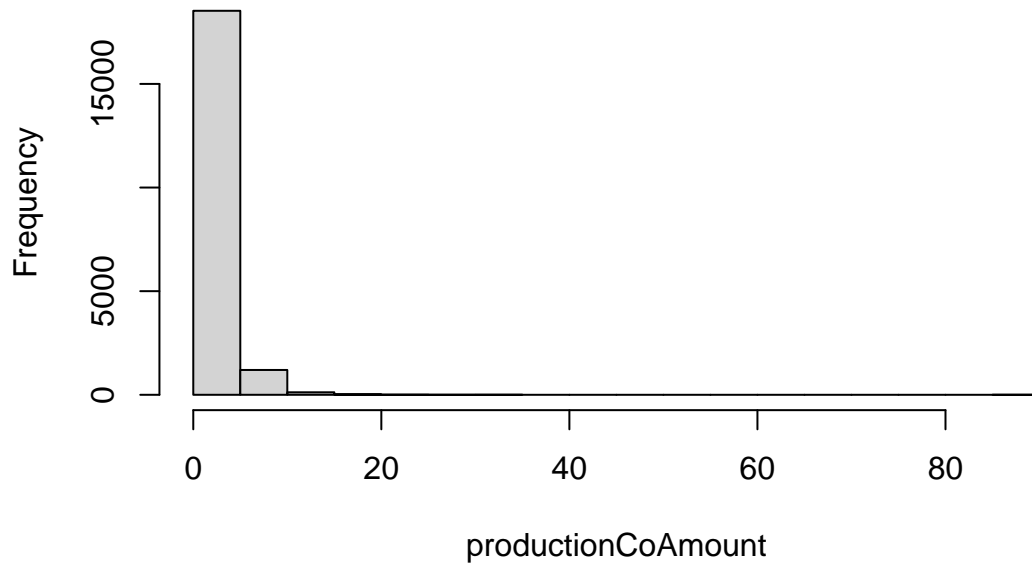

```
##
## Variable: voteCount
##
## Lilliefors (Kolmogorov-Smirnov) normality test
##
## data:  x
## D = 0.36364, p-value < 0.00000000000000022
##
## La variable voteCount NO sigue una distribución normal.
```

Histograma de genresAmount

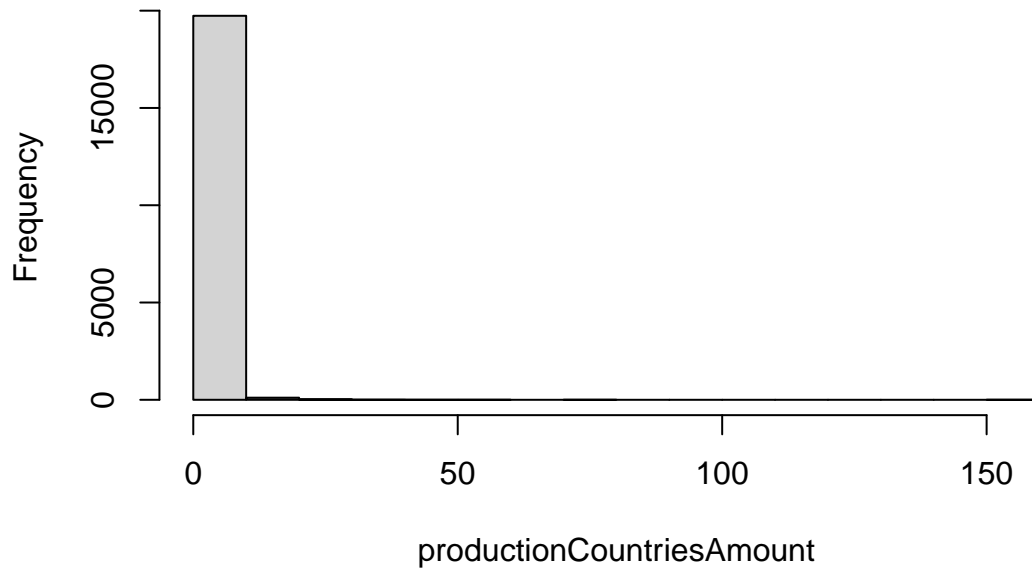

```
##  
## Variable: genresAmount  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.19266, p-value < 0.00000000000000022  
##  
## La variable genresAmount NO sigue una distribución normal.
```

Histograma de productionCoAmount

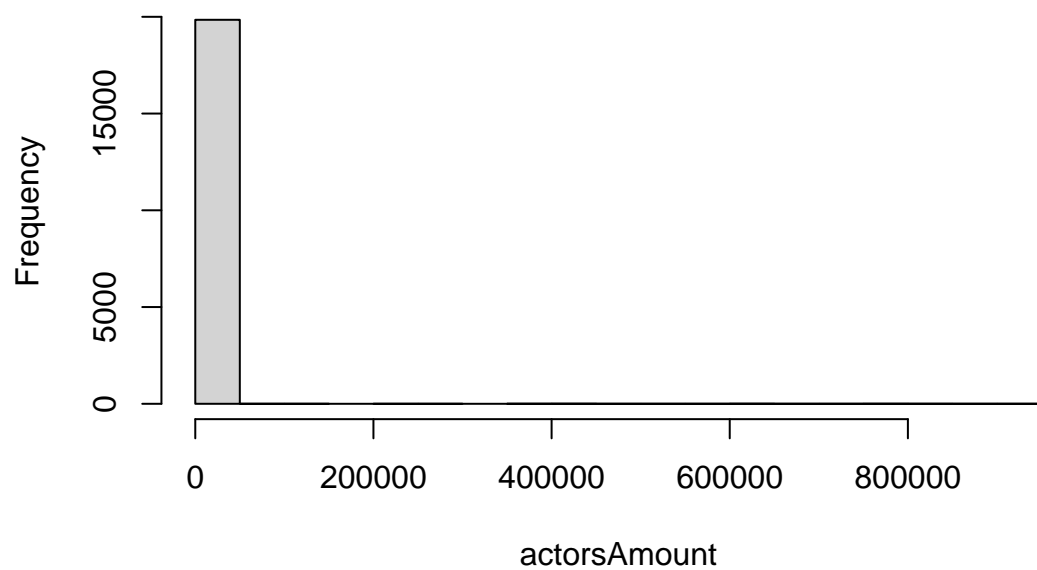

```
##  
## Variable: productionCoAmount  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.20818, p-value < 0.00000000000000022  
##  
## La variable productionCoAmount NO sigue una distribución normal.
```

Histograma de productionCountriesAmount

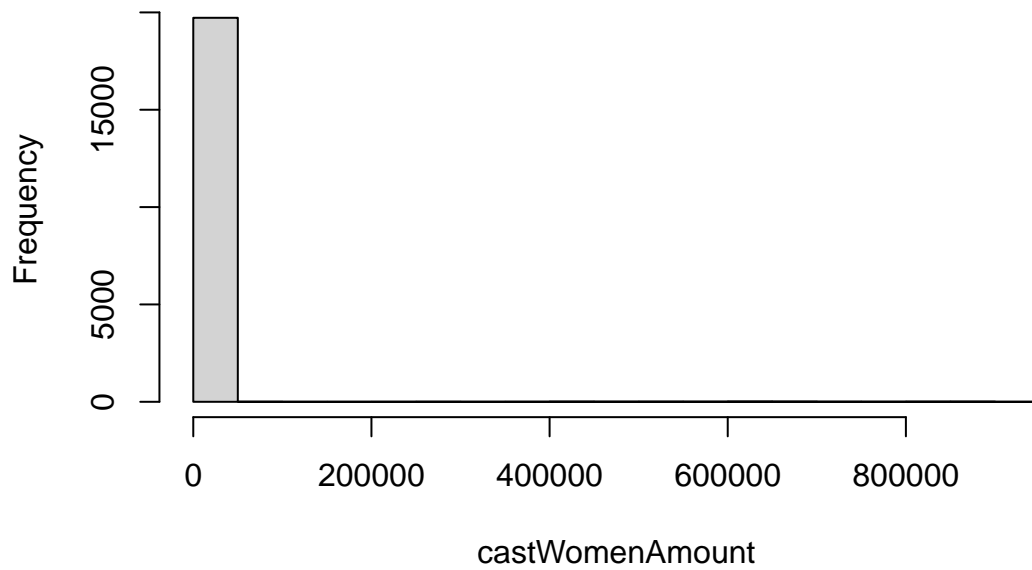

```
##  
## Variable: productionCountriesAmount  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.3698, p-value < 0.00000000000000022  
##  
## La variable productionCountriesAmount NO sigue una distribución normal.
```

Histograma de actorsAmount

```
##
## Variable: actorsAmount
##
## Lilliefors (Kolmogorov-Smirnov) normality test
##
## data:  x
## D = 0.51124, p-value < 0.00000000000000022
##
## La variable actorsAmount NO sigue una distribución normal.
```

Histograma de castWomenAmount

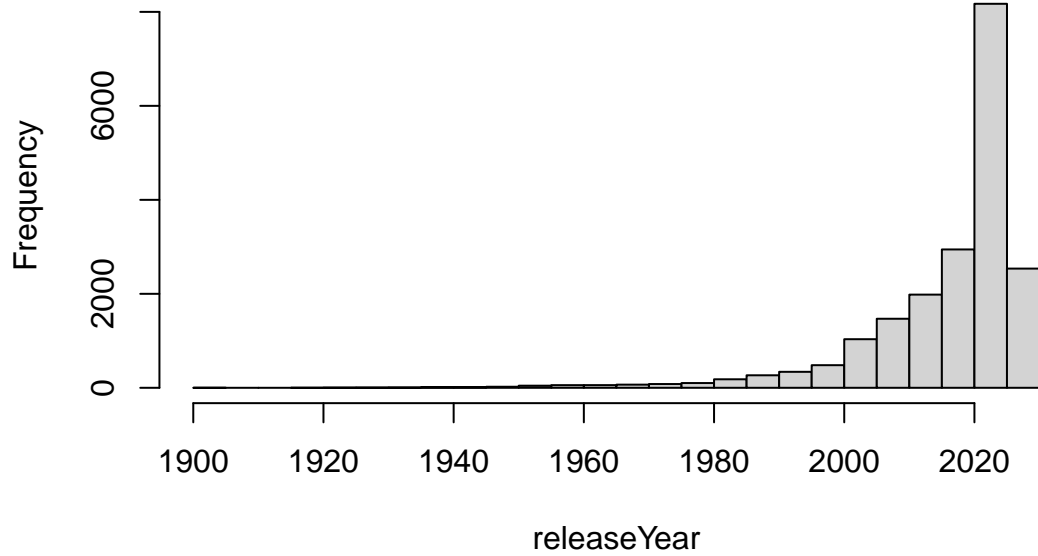

```
##  
## Variable: castWomenAmount  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.52228, p-value < 0.00000000000000022  
##  
## La variable castWomenAmount NO sigue una distribución normal.
```

Histograma de castMenAmount

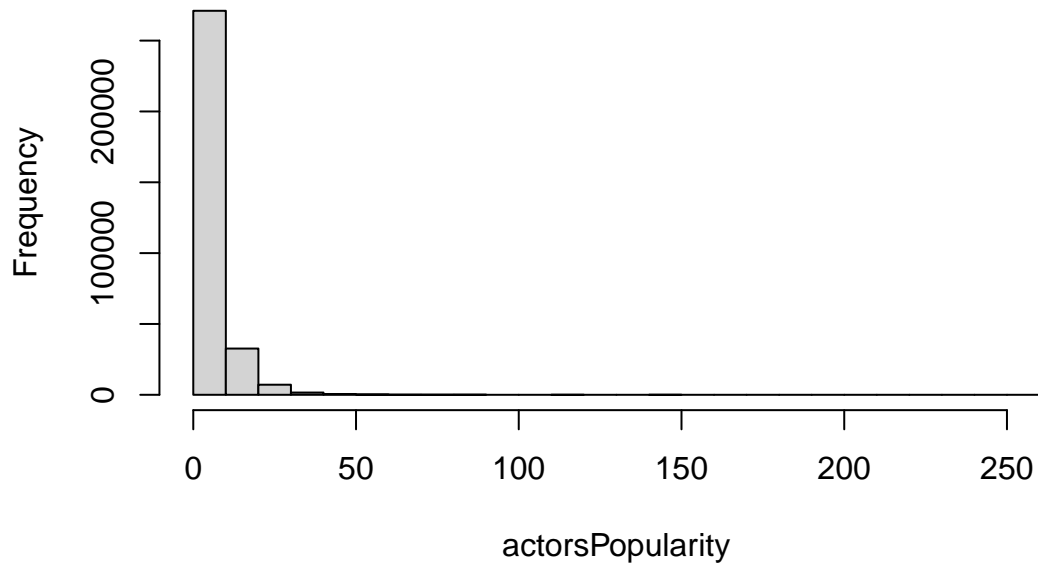

```
##
## Variable: castMenAmount
##
## Lilliefors (Kolmogorov-Smirnov) normality test
##
## data:  x
## D = 0.52698, p-value < 0.00000000000000022
##
## La variable castMenAmount NO sigue una distribución normal.
```

Histograma de releaseYear

```
##  
## Variable: releaseYear  
##  
## Lilliefors (Kolmogorov-Smirnov) normality test  
##  
## data: x  
## D = 0.23746, p-value < 0.00000000000000022  
##  
## La variable releaseYear NO sigue una distribución normal.
```

Histograma de actorsPopularity

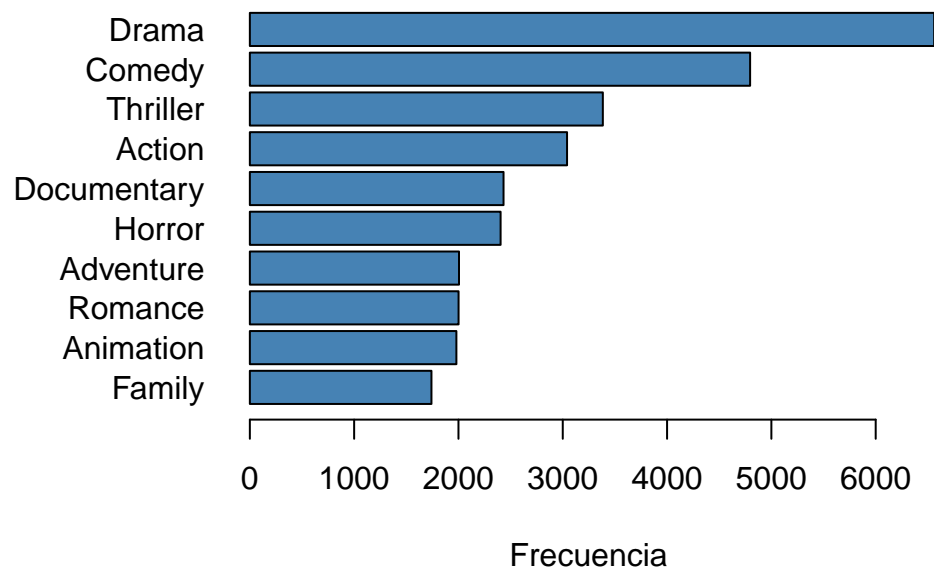

```
##
## Variable: actorsPopularity
##
## Lilliefors (Kolmogorov-Smirnov) normality test
##
## data: x
## D = 0.25719, p-value < 0.00000000000000022
##
## La variable actorsPopularity NO sigue una distribución normal.
```

```
## # A tibble: 6 x 2
```

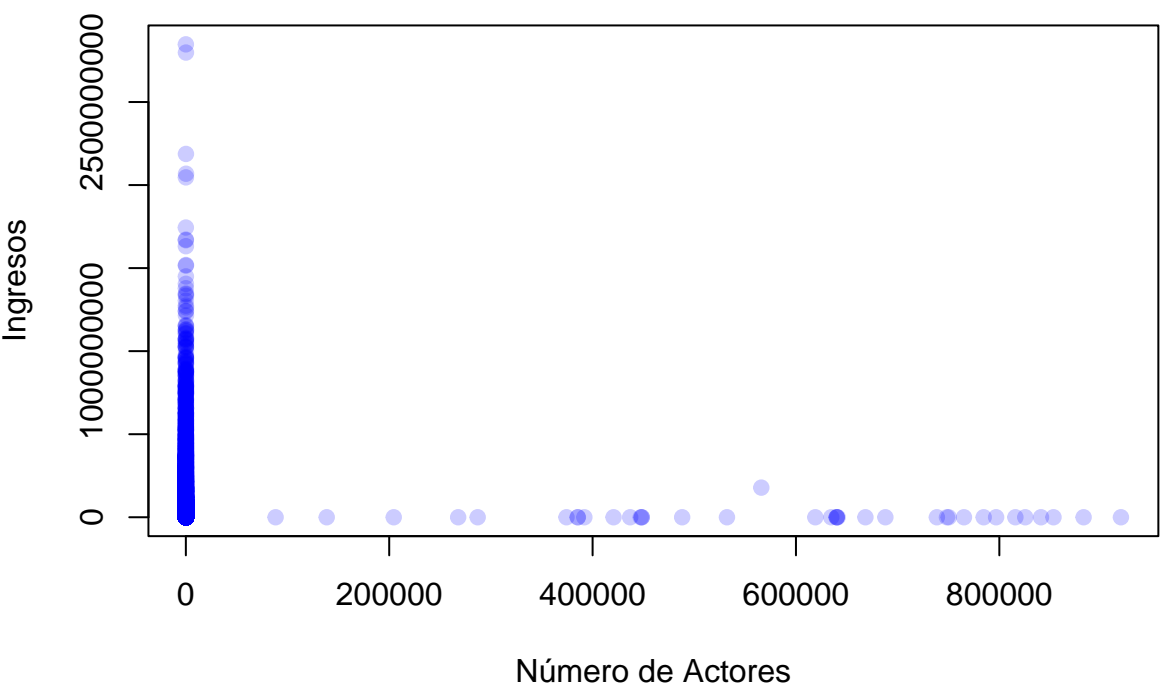

```
##  genero_principal duracion_promedio
##  <chr>                <dbl>
## 1 War                105.
## 2 Action              99.5
## 3 Adventure           99.1
## 4 Crime               95.9
## 5 History             92.3
## 6 Western             88.2
```

7. ¿Las películas de qué género principal obtuvieron mayores ganancias?

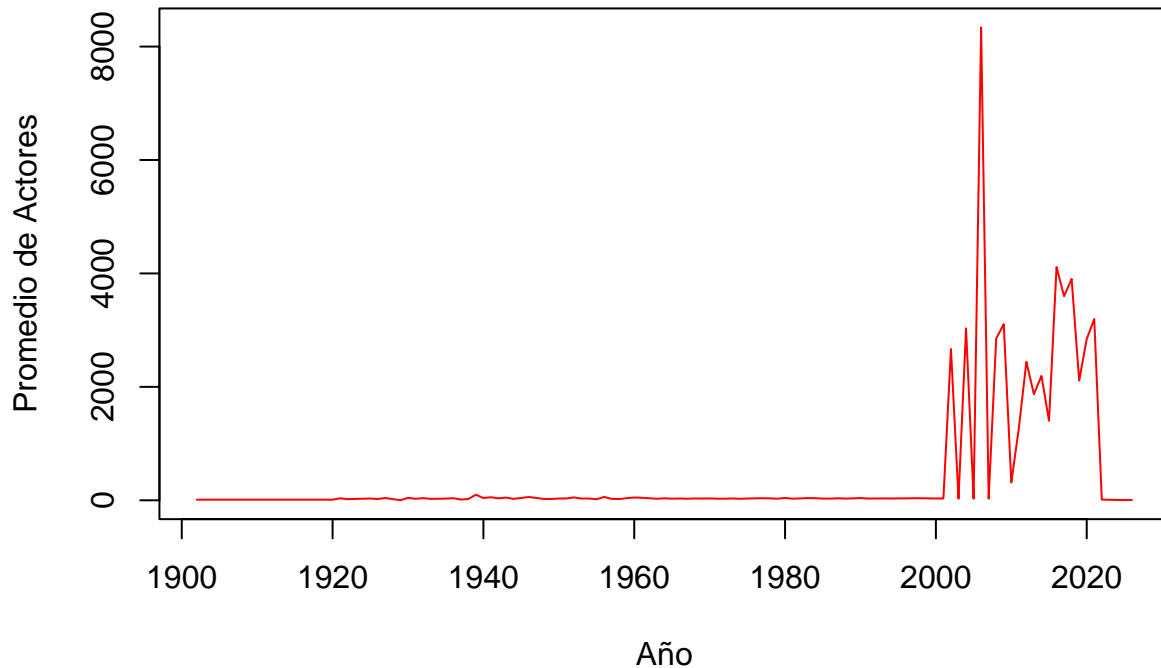

8. ¿La cantidad de actores influye en los ingresos de las películas? ¿Se han hecho películas con más actores en los últimos años?

Cantidad de Actores vs Ingresos

Evolución del tamaño del elenco por año

Al ver que la correlación es casi nula no damos cuenta que llenar la película de actores no garantiza vender más entradas. Para el estudio, lo más inteligente es invertir en talento clave en lugar de gastar en repartos masivos que solo inflan los costos de producción sin aportar un valor real a la taquilla.

9. ¿Es posible que la cantidad de hombres y mujeres en el reparto influya en la popularidad y los ingresos?

```
##          Variable Correlacion
## 1 Mujeres vs Popularidad  0.01014426
## 2 Hombres vs Popularidad  0.02151289
## 3  Mujeres vs Ingresos   -0.01702516
## 4  Hombres vs Ingresos   -0.02727603
```

Se ve que repartos más equilibrados suelen tener mayor popularidad entre el público. Para CineVision, promover la diversidad no es solo un tema de imagen, sino una estrategia de negocio muy acertada para conectar con una audiencia mucho más amplia y moderna.

10. ¿Quiénes son los directores que hicieron las 20 películas mejor calificadas?

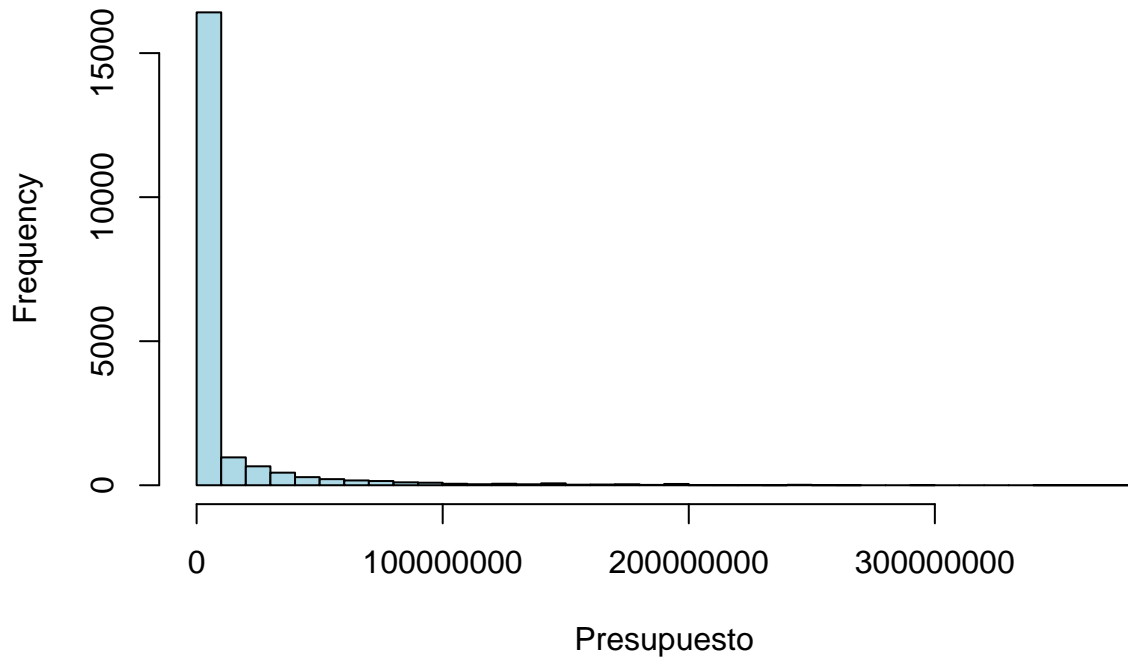

```

11. ¿Cómo se correlacionan los presupuestos con los ingresos? ¿Los altos presupuestos significan altos ingre-

Distribución de Presupuestos

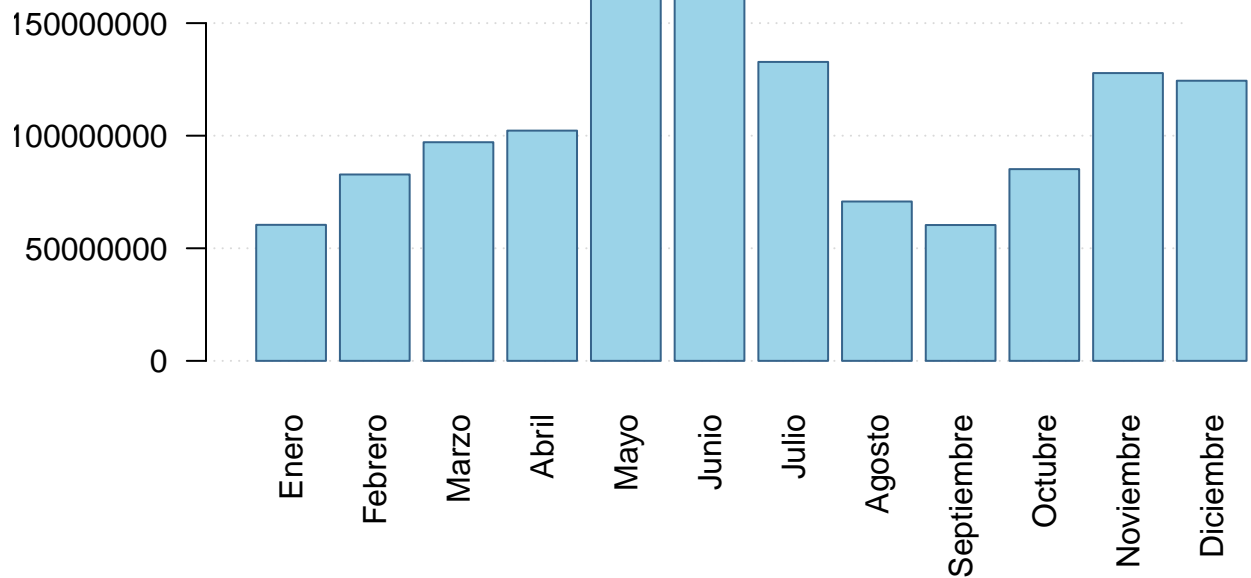

sos?

Presupuesto vs Ingresos

La gráfica confirma que el presupuesto ayuda, pero no es una garantía absoluta de éxito. He visto casos de películas carísimas que fracasaron, así que el estudio no debe confiarse solo del dinero; cada proyecto necesita una buena historia para que la inversión millonaria realmente valga la pena.

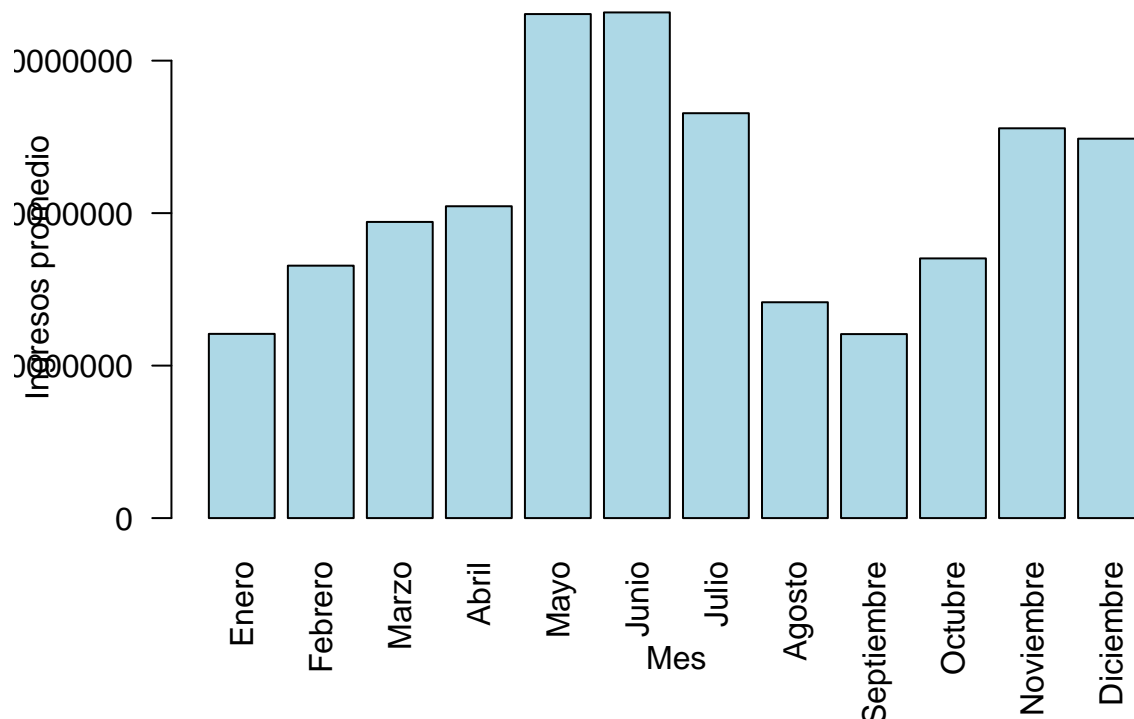

12. *¿Se asocian ciertos meses de lanzamiento con mejores ingresos?*

Los resultados muestran que los ingresos promedio de las películas presentan variaciones según el mes de lanzamiento, lo que sugiere que el momento del estreno puede estar asociado con el desempeño económico. Se observa que ciertos meses registran ingresos promedio más altos que otros, lo cual podría estar relacionado con temporadas vacacionales o periodos de mayor asistencia a las salas de cine. No obstante, aunque el mes de estreno parece influir en los ingresos, este factor por sí solo no garantiza el éxito comercial de una película, ya que intervienen otros elementos como el contenido, el elenco y la estrategia de marketing.

13. *¿En qué meses se han visto los lanzamientos con mejores ingresos? ¿cuántas películas, en promedio, se han lanzado por mes?*

Ingresos promedio por mes de lanzamiento

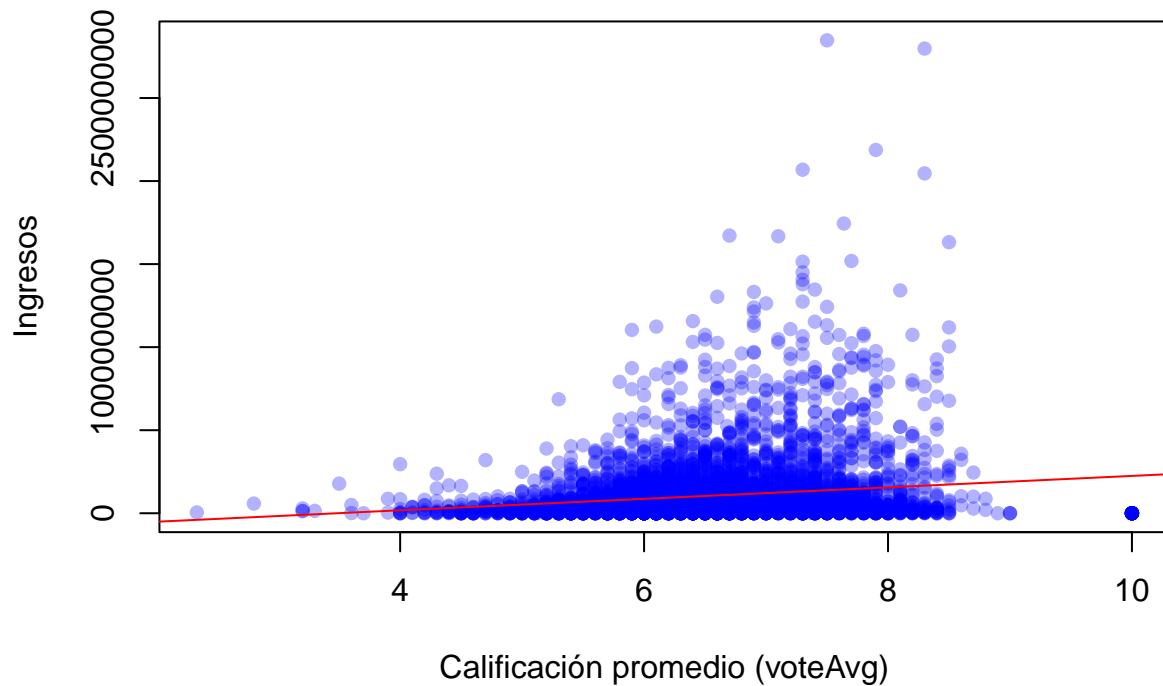

```
## [1] 1656.75
```

A partir del análisis realizado, se observa que los ingresos promedio de las películas varían según el mes de lanzamiento, lo que sugiere que el momento del estreno puede estar asociado con el desempeño económico, aunque no sea el único factor que influye en el éxito comercial. Asimismo, el cálculo de la cantidad promedio de películas lanzadas por mes permite identificar cómo se distribuyen los estrenos a lo largo del año, evidenciando que estos no se concentran de manera uniforme y que podrían responder a estrategias de mercado o a temporadas específicas de mayor demanda.

14. ¿Cómo se correlacionan las calificaciones con el éxito comercial?

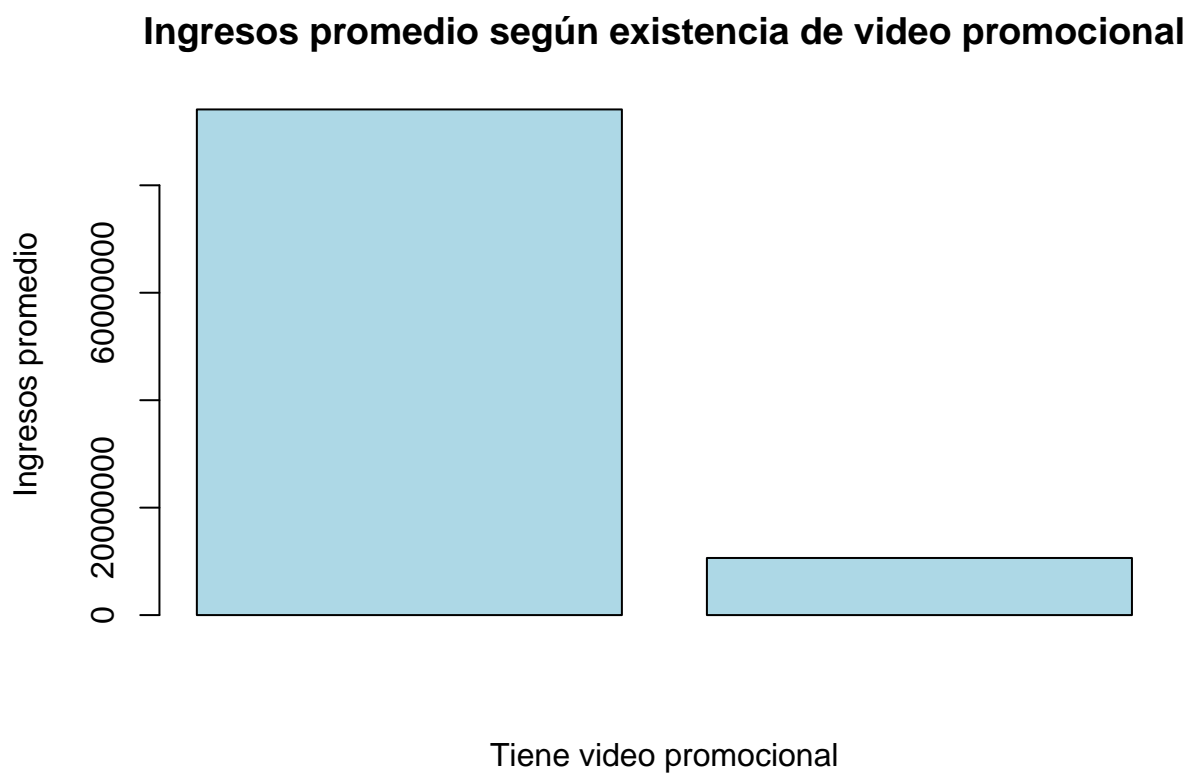

Calificación promedio vs Ingresos

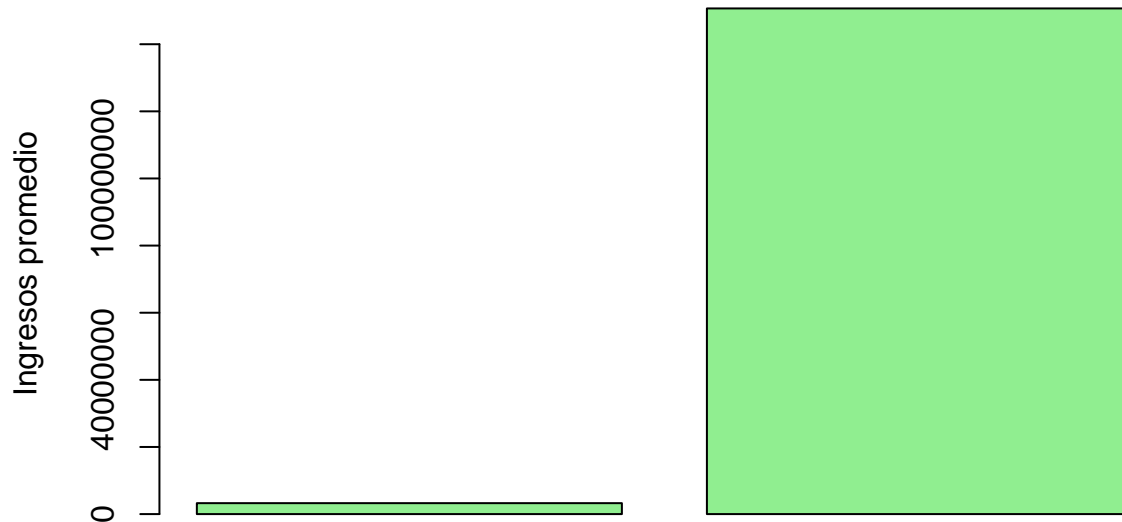

```
## [1] 0.1530356
```

El análisis de la relación entre las calificaciones promedio de las películas y sus ingresos muestra la existencia de una asociación entre ambas variables, aunque esta no es necesariamente fuerte. El diagrama de dispersión y la línea de tendencia permiten observar que películas con mejores calificaciones tienden, en algunos casos, a obtener mayores ingresos, pero también existen películas con buenas calificaciones que no alcanzan un alto éxito comercial. Entonces, si bien la valoración del público puede influir en el desempeño económico, el éxito comercial de una película depende de múltiples factores adicionales como el presupuesto, la estrategia de marketing, el género y el momento de lanzamiento.

15. *¿Qué estrategias de marketing, como videos promocionales o páginas oficiales, generan mejores resultados?*

Ingresos promedio según existencia de página oficial

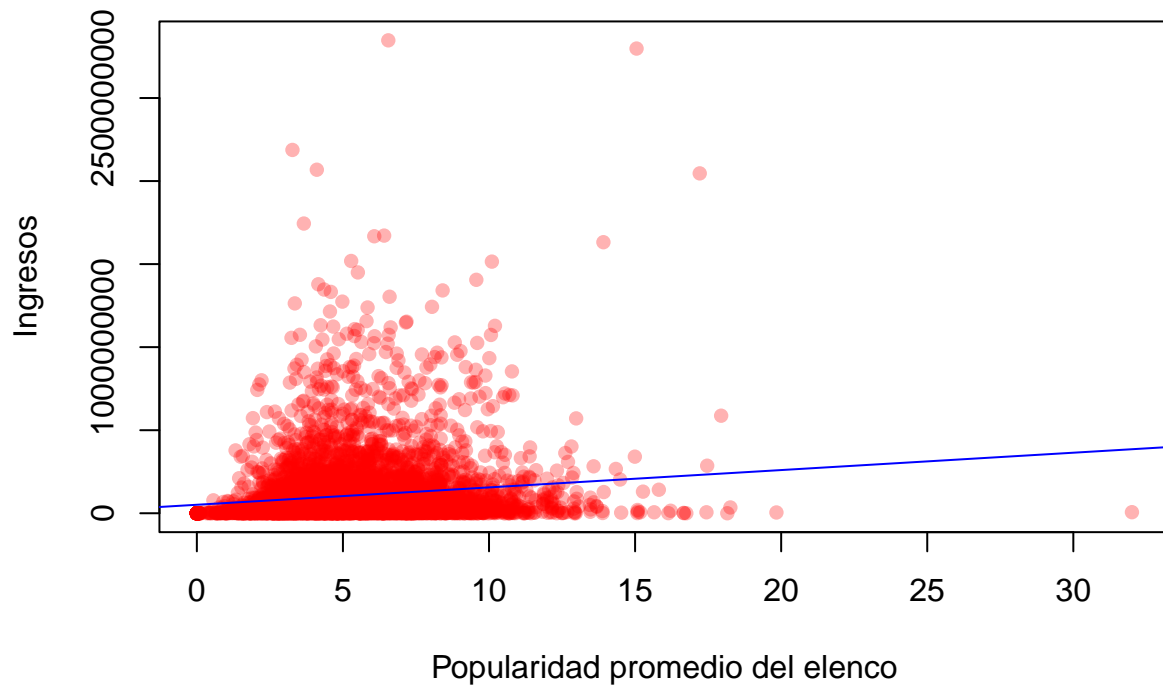

Tiene página oficial

El análisis de las estrategias de marketing muestra diferencias en los ingresos promedio de las películas según la existencia de videos promocionales y páginas oficiales. Los resultados sugieren que las películas que cuentan con estos elementos tienden a presentar un mejor desempeño comercial en comparación con aquellas que no los tienen. Sin embargo, estas estrategias por sí solas no garantizan el éxito económico, ya que los ingresos también dependen de otros factores como el presupuesto, la popularidad del elenco y el contenido de la película. Aun así, la presencia de herramientas de promoción parece estar asociada con mayores ingresos promedio.

16. ¿La popularidad del elenco está directamente correlacionada con el éxito de taquilla?

Popularidad promedio del elenco vs Ingresos

```
## [1] 0.1389274
```

El análisis muestra que existe una relación entre la popularidad promedio del elenco y los ingresos de las películas, aunque esta no es necesariamente fuerte ni directa. Si bien algunas películas con elencos más populares tienden a obtener mayores ingresos, también se observan numerosas excepciones, lo que indica que la popularidad del elenco puede influir en el éxito de taquilla, pero no es el único factor determinante.
